

MINI PROJECT — CLICKABLE PROTOTYPE

LearnSphere

A modern mobile learning platform — from design thinking to a clickable, six-screen prototype. This document explains the research, design system, user flow, and usability decisions behind the product.

1. Project Overview

LearnSphere is a mobile-first online learning platform concept designed to make skill-building feel approachable, motivating, and friction-free. The prototype demonstrates a complete learner journey — from first launch and course discovery, through a detailed course page and video lesson, into a personal learning dashboard and profile. Every screen is interconnected with working navigation so stakeholders can click through the experience exactly as a real user would.

The product targets self-directed learners — students, early-career professionals, and career-switchers — who want short, structured, expert-led courses they can complete on the go. Rather than replicating the dense, course-catalog feel of legacy platforms, LearnSphere prioritises a calm visual hierarchy, generous spacing, and clear primary actions so users always know what to do next.

2. Problem Statement & Goals

The problem

Existing learning apps overwhelm new users with huge catalogs, dense course pages, and unclear progress feedback. Learners drop off because they cannot quickly find a relevant course, do not feel a sense of momentum, and lose track of where they left off.

Design goals

- Reduce time-to-first-course to under 60 seconds
- Make progress visible and motivating on every visit
- Keep course detail pages scannable, not intimidating
- Support one-thumb mobile navigation throughout

3. Design Thinking Process

The prototype was built following the five-stage Stanford d.school design-thinking framework, ensuring decisions were grounded in user needs rather than aesthetics alone.

6. Design System

A token-based design system keeps the product visually consistent and easy to scale. Colours, typography, spacing, and components were defined once and reused across all six screens — mirroring how a Figma library with styles and components would be structured.

6.1 Colour Palette

The palette pairs a trustworthy indigo primary with a warm coral accent. Indigo conveys focus and learning; coral draws the eye to the single most important action on each screen. Neutrals carry content without competing.

Primary
#5B5BF5

Primary Dk
#3D3DD6

Primary Soft
#EEEEFF

Accent
#FF8A5C

Ink
#1A1B2E

Background
#F6F7FB

SEMANTIC
Success #22C55E · Warning #F5A623 · Info #0EA5E9

CONTRAST
Body text on white = 11.6:1 (AAA). Primary on white = 4.6:1 (AA).

USAGE RULE
One accent per screen, reserved for the primary CTA only.

10. Prototype Walkthrough

The clickable prototype comprises six interconnected mobile screens. Each card below summarises the screen's purpose and the key design decisions behind it. In the live prototype, every highlighted element navigates to the next logical screen, reproducing a real user journey.
